

Oviso Rail Pty Ltd Capability Statement

Introduction

Oviso Rail Pty Ltd is a leading provider of specialist railway signalling services to rail infrastructure and private companies world-wide.

Oviso Rail provides its clients with a complete set of professional skills for design, verification, principles testing, commissioning and certification of signalling interlockings: - SSI, Westlock, Westrace, Microlok and RRI.

Capability

Oviso Rail is the solution – offering a range of services through fully competent IRSE licensed engineers focusing on 3 core activities:

- i. Design, checking and verification of signalling circuits, logic and data.**
- ii. Principles testing of CBI and RRI interlockings.**
- iii. Outsourcing of competent signalling engineers and test equipment.**

Oviso Rail brings a wealth of experience and unique attitude to signalling. Our clients benefit from our expert skills and professionalism allowing the client full satisfaction that the complete integrity of the system is being designed and tested to the highest level.

Oviso Rail through its framework also provides outsourcing of experienced, competent engineers in the following disciplines; signalling design, checking, verification and principles testing.

Oviso Rail has access to a range of simulation equipment SSI, Westlock, Westrace and Microlok allowing full off-site design and testing activities to be completed. This increases client productivity and reduces client costs.

Oviso Rail also provides clients an option to lease a fully populated Microlok/MISS setup at our office in Sydney. With plans to further enhance the company's capability to extend its range of simulation equipment, this offers our clients a cost effective option when tendering for projects.
